

Company Profile

R.T. Valvole Industriali Srl

Turbigo, Via Alle Cave 25/29 - Italy
www.rtvvalves.com
info@rtvalves.com
Established 1947

Summary

Since our foundation in the year 1947, we produce valves for industrial applications.

The standard production range covers the sizes from DN 50 up to DN 1000 for pressure rating up to PN 320.

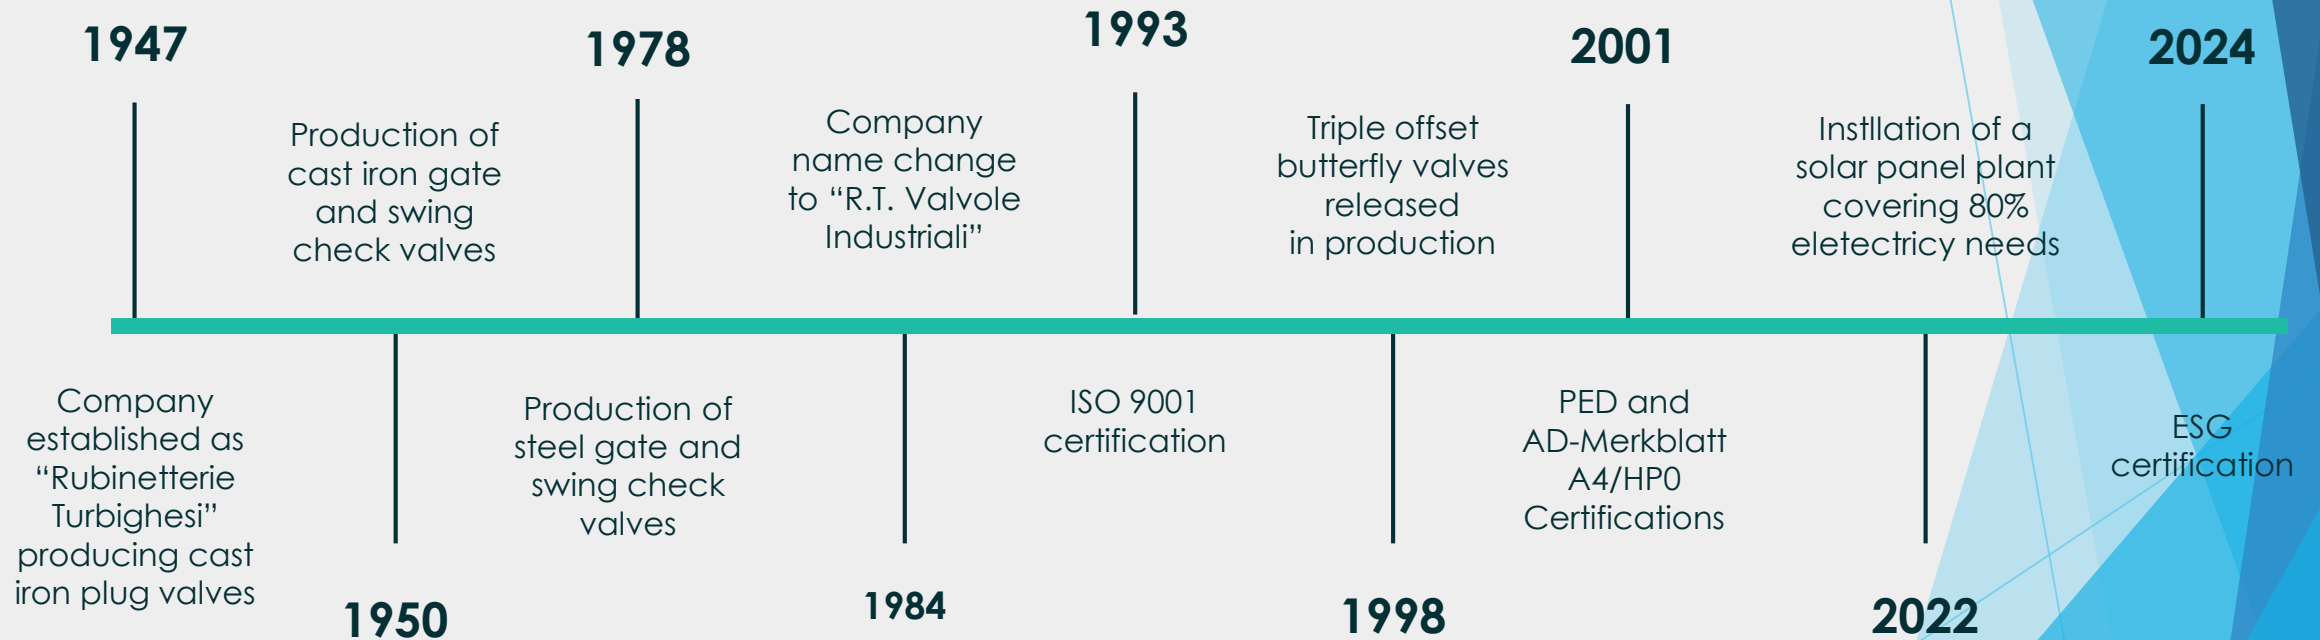

A long experience in making valve with the most advanced technologies guarantees a top quality product with a wide range of solutions for many different applications.

For these reasons, today, the valves produced by us are widely used in chemical, petrochemical, food, gases, power generation, water treatment and distribution plants in many countries.

The design, experiment, manufacturing, and test of the products are done under one roof in strict accordance with the relevant national standards and engineering rules to ensure an easy installation, maintenance, replacing and as guarantee of a high product quality and long durability.

The company energies and resources have always been addressed to the research of new solutions and to the acquisition of most advanced technologies offered by the market, in order to achieve a constant evolution of the valve performance and quality. Project innovations, performances and confidence improvement, assurance and easy maintenance are criteria always applied in the production.

Company History

Mission, Vision & Values
